

# Watershed Management

is planning and implementing best practices for the following topics:

Community  
Vision

History &  
Culture

Stormwater  
Management

Infrastructure

Land Use

From ridge

Resource &  
Waste  
Management

Partnerships

to reef

Hydrology

Restoration

Marine Use

Water Quality

& MORE

## The Core Principles:

- 1) Working with natural systems
- 2) Is continuous and multi-disciplinary
- 3) Framework supports partnering, using sound science, taking well-planned actions and achieving results
- 4) Flexible

# The 5-year Update Coral Bay WMP - 2020

This management plan will include both technical elements to identify, characterize, and rank pressing areas for intervention, and extensive stakeholder engagement efforts to gather problem area information as well as a shared vision for the watershed's future.

The project will produce two documents:

- 1) An updated watershed management plan (following the EPA's Watershed Planning guidelines) with a focus on spatial and quantitative modeling of the watershed to identify priority areas for remediation.
- 2) A user-friendly visioning document and online mapping platform integrating stakeholder input that illustrates community goals and strategies to achieve them.

Supported by the:

# The Coral Bay Watershed Management Project

A holistic and Ridge to Reef approach to protecting the Coral Bay Watershed Management Area (CBWMA) and supporting the community that lives within it.

The Coral Bay Watershed Management Project (CBWMP) is an on-going process that is guided by the Watershed Management Plan (WMP). After the WMP is developed, it is updated about every 5 years.

In 2008, the Center for Watershed Protection (CWP) developed the first Coral Bay WMP as a pilot for the USVI. It outlined an overall watershed management strategy and a set of actions to improve practices and protect the bay.

In 2014, Coral Bay Community Council (CBCC) updated the Coral Bay WMP using the EPA's Watershed Planning guidelines with a technical focus on turbidity and floatable debris.

2008 & 2014

Both plans completed these tasks!

Find out more inside & on back about watershed management and the 2020 Plan as CBCC continues the watershed management process!
